

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method for selecting a file from a file list, the method comprising:  
in response to an ~~accessing~~ opening of the file list by a user, determining if there was a file previously selected by the user from the file list before the opening of the file list;  
if it is determined that there was a file previously selected by the user from the file list before the opening of the file list, automatically determining if there is a next file listed relative to the previously selected file in the file list; and  
if it is determined that there is a next file listed relative to the previously selected file in the file list, automatically displaying the file list with the next file highlighted.
2. (Original) The method of claim 1 wherein the next file is listed immediately after the previously selected file in the file list.
3. (Original) The method of claim 1 wherein the next file is listed a predetermined number of files after the previously selected file in the file list.
4. (Original) The method of claim 1 wherein the next file is listed immediately before the previously selected file in the file list.
5. (Original) The method of claim 1 wherein the next file is listed a predetermined number of files before the previously selected file in the file list.
6. (Original) The method of claim 1 wherein the next file is the file listed immediately to the left, right, up, or down of the previously selected file in the file list.
7. (Original) The method of claim 1 wherein the next file is the file listed a predetermined number of files to the left, right, up, or down of the previously selected file in the file list.

8. (Previously presented) The method of claim 1 wherein the next file is the file listed immediately in front of or behind the previously selected file in the file list.
9. (Original) The method of claim 1 wherein the next file is the file listed a predetermined number of files in front of or behind the previously selected file in the file list.
10. (Original) The method of claim 1 wherein the next file is a file listed on an immediately preceding or following screen full of information.
11. (Original) The method of claim 1 wherein the next file is the previously selected file in the file list.
12. (Previously presented) The method of claim 1 further comprising: if there was not a file previously selected from the file list, displaying the file list with a predetermined default file highlighted.
13. (Original) The method of claim 12 wherein the predetermined default file is the first file in the file list.
14. (Previously presented) The method of claim 1 further comprising: if there is not a next file listed relative to the previously selected file in the file list, displaying the file list with a predetermined default file highlighted.
15. (Original) The method of claim 14 wherein the predetermined default file is the first file in the file list.
16. (Original) The method of claim 14 wherein the predetermined default file is the previously selected file from the file list.
17. (Previously Presented) The method of claim 1 further comprising in response to a user selecting a file from a file list, saving the information identifying the selected file.
18. (Original) The method of claim 17 wherein the saved information is the file name of the selected file.

19. (Original) The method of claim 17 wherein the saved information is an index number of the selected file in the file list.

20. (Currently Amended) A user input system for selecting a file from a file list, the file list including a first file and at least one subsequent file, the user input system comprising:

a file selection screen for displaying files in the file list;

first means for, in response to an ~~accessing~~opening of the file list by a user, determining if a file has been previously selected by the user from the file list before the opening of the file list;

second means for, if it is determined that there was a file previously selected by the user from the file list before the opening of the file list, automatically determining if a next file is listed in relation to the previously selected file from a file list; and

means for automatically highlighting a predicted file of interest from the file list, the means for highlighting being configured to automatically highlight the next file in relation to the previously selected file from a file list if one exists.

21. (Original) The user input system of claim 20 wherein the means for highlighting is configured to highlight the first file in the file list if the first means for determining determines that a file has not been previously selected from the file list.

22. (Original) The user input system of claim 20 wherein the means for highlighting is configured to highlight a default file in the file list if the second means for determining determines that there is not a next file in relation to the previously selected file from a file list.

23. (Previously presented) The user input system of claim 22 wherein the default file is the first file in the file list.

24. (Previously presented) The user input system of claim 22 wherein the default file is the previously selected file from the file list.

25. (Original) The user input system of claim 20 further comprising means for saving information identifying a selected file.

26. (Original) The user input system of claim 25 wherein the means for saving information saves a file name identifying the selected file.
27. (Original) The user input system of claim 25 wherein the means for saving information saves an index corresponding to the selected file in the file list.
28. (Original) The user input system of claim 20 wherein the next file is listed immediately after the previously selected file in the file list.
29. (Original) The user input system of claim 20 wherein the next file is the previously selected file in the file list.
30. (Currently Amended) A device configured for selecting files from a file list, the file list including a first file and at least one other file, the device comprising:  
a storage medium configured for storing files which can be selected;  
a display configured for displaying at least one file list;  
memory configured for storing information identifying a previously selected file from the file list; and  
a processor configured for, in response to an ~~accessing~~ opening of the file list by a user, identifying the previously selected file from the stored information, if it is determined that there the file previously selected was selected by the user from the file list before the opening of the file list, automatically determining if a next file exists in relation to the previously selected file in the file list, and automatically highlighting the next file, if one exists, in the file list displayed on the display.
31. (Original) The device of claim 30 wherein the processor is configured to highlight a default file in the file list if a next file does not exist.
32. (Original) The device of claim 31 wherein the default file comprises the first file in the file list.
33. (Original) The device of claim 31 wherein the default file comprises the previously selected file in the file list.

34. (Original) The device of claim 30 wherein the processor is configured to highlight the first file in the file list if it determines that a previously selected file does not exist.
35. (Original) The device of claim 30 wherein the next file is listed immediately after the previously selected file in the file list.
36. (Original) The device of claim 30 wherein the next file is the previously selected file in the file list.
37. (Original) The device of claim 30 wherein the device further comprises a mobile communication device.
38. (Original) The device of claim 30 wherein the device further comprises a mobile telephone.
39. (Original) The device of claim 30 wherein the device further comprises a personal digital assistant.
40. (Currently Amended) A computer program product, embodied in a computer-readable medium, for selecting a file from a file list, the file list including a first file and at least one other file, the computer program product comprising:  
computer code configured to:  
in response to an ~~accessing~~ opening of the file list by a user, determine if there was a file previously selected by the user from the file list before the opening of the file list;  
if it is determined that there is a next file listed relative to the previously selected file in the file list before the opening of the file list, automatically determine if there is a next file listed in relation to the previously selected file in the file list; and  
if it is determined that there is a next file listed relative to the previously selected file in the file list, automatically display the file list with the next file highlighted.
41. (Original) The computer code product of claim 40 further comprising computer code configured to display the file list with a predetermined default file highlighted if there is not a next file listed in relation to the previously selected file in the file list.

42. (Original) The computer code product of claim 41 wherein the predetermined default file is the first file in the file list.
43. (Original) The computer code product of claim 41 wherein the predetermined default file is the previously selected file from the file list.
44. (Original) The computer code product of claim 40 wherein the computer code is further configured to save information identifying a selected file in response to a user selecting a file from a file list.
45. (Original) The computer code product of claim 44 wherein the saved information is the file name of the selected file.
46. (Original) The computer code product of claim 44 wherein the saved information is index information of the selected file in the file list.
47. (Original) The computer code product of claim 40 wherein the next file is listed immediately after the previously selected file in the file list.
48. (Original) The computer code product of claim 40 wherein the next file is the previously selected file in the file list.
